

Web Scraper GitHub Project Notes

Web Scraper using Python

Overview of web scraping and GitHub project structure.

What is Web Scraping?

Extracting data from websites automatically using code.

Tools Used

Python, Requests, BeautifulSoup, Pandas, GitHub.

Project Workflow

Send request → Parse HTML → Extract data → Save results.

Sample Code

`requests.get()` and `BeautifulSoup()` are commonly used.

Applications

Price tracking, news aggregation, research, data collection.

Ethical Considerations

Respect `robots.txt`, terms of service, and rate limits.

Conclusion

Web scraping helps automate data collection efficiently.
